

# International Journal of Primatology

The Official Journal of the International Primatological Society

Volume 6

The *International Journal of Primatology* is a multidisciplinary journal devoted to basic primatology, i.e., to studies in which the primate is treated as such. To this end, the journal brings together laboratory and field studies from such diverse disciplines as anatomy, anthropology, ethology, paleontology, psychology, sociology, and zoology. The journal publishes high-quality original articles, short articles, and reviews that have been carefully referred by experts in the field, and also publishes book reviews. The journal aims to provide a forum for research workers and students in the field of fundamental primatology and to expedite communication between them and other scientists interested in nonhuman primates per se.
